ABSTRACT

Many companies have developed large applications and business models using SCL. They do this because SCL offers a powerful but easy-to-use programming language. SCL programs can be run in batch and do not require SAS/AF® once they are compiled. SCL offers a degree of security because the source code can be removed so that it isn’t seen by those using the programs. Companies are now moving into the BI world and taking their SCL programs with them by running SCL with a BI Stored Process. This presentation will show how to use SCL outside of the SAS/AF Frame.

No paper was submitted for publication.
