Customer Case Study: Building a Clinical Trials Data Repository using the CDISC SDTM standards and ETL
Musa Nsereko, Cephalon

ABSTRACT

In this presentation, Nsereko focuses on how ETL was used to design and load a clinical data repository based on the CDISC SDTM data standard. Concepts of the clinical data repository design and the techniques applied to transform the data into CDISC SDTM structures are discussed. Potential uses for such integrated clinical information is presented. Comparisons are made between the use of ETL and base SAS programming.

No paper was submitted for publication.
