

Paper 106-30

Building Blocks to a Solid Foundation for Software Development

Denise Brown, Action Training International, Inc.

ABSTRACT

Whether you are purchasing off-the-shelf products or developing from the ground up, your software development projects can get out of control if a solid foundation has not been established. This presentation covers the building blocks of using Project Management when working with software projects that have vague or ambiguous parameters. A set of working templates along with a checklist is provided with this presentation.
